

A VERY SIMPLE STARTER GUIDE

MY FIRST AI AGENT

In under ten minutes, launch a helpful agent that organizes your messy desktop with your approval.

FREE

NO CODING

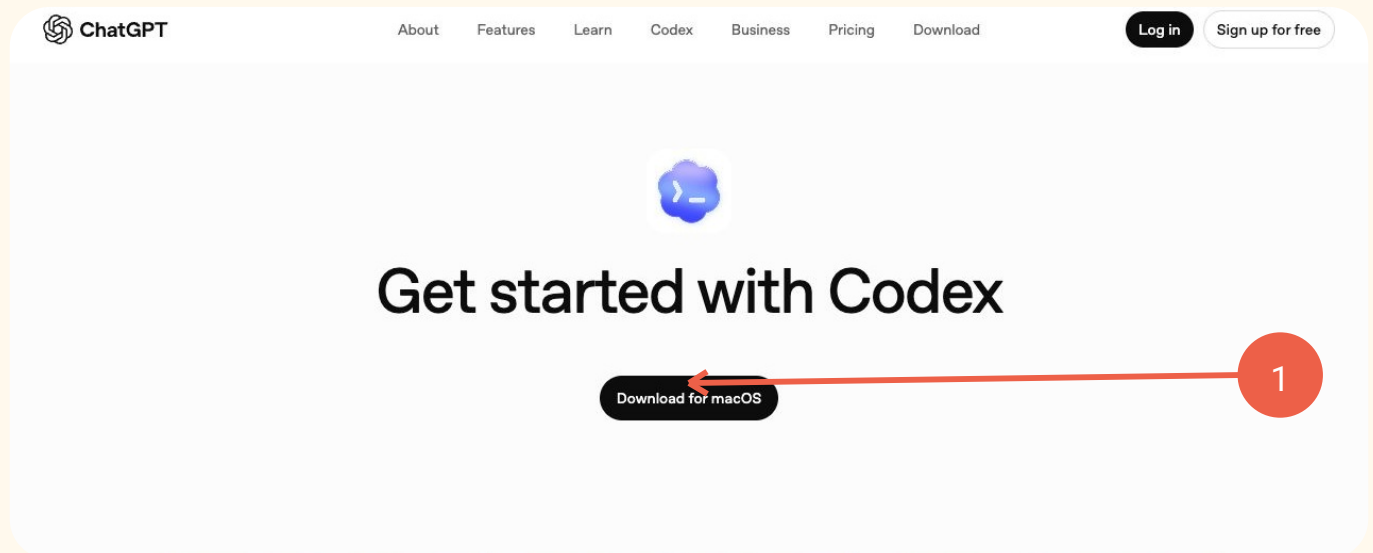

BEGINNER FRIENDLY

All you need is a computer and a free ChatGPT account.

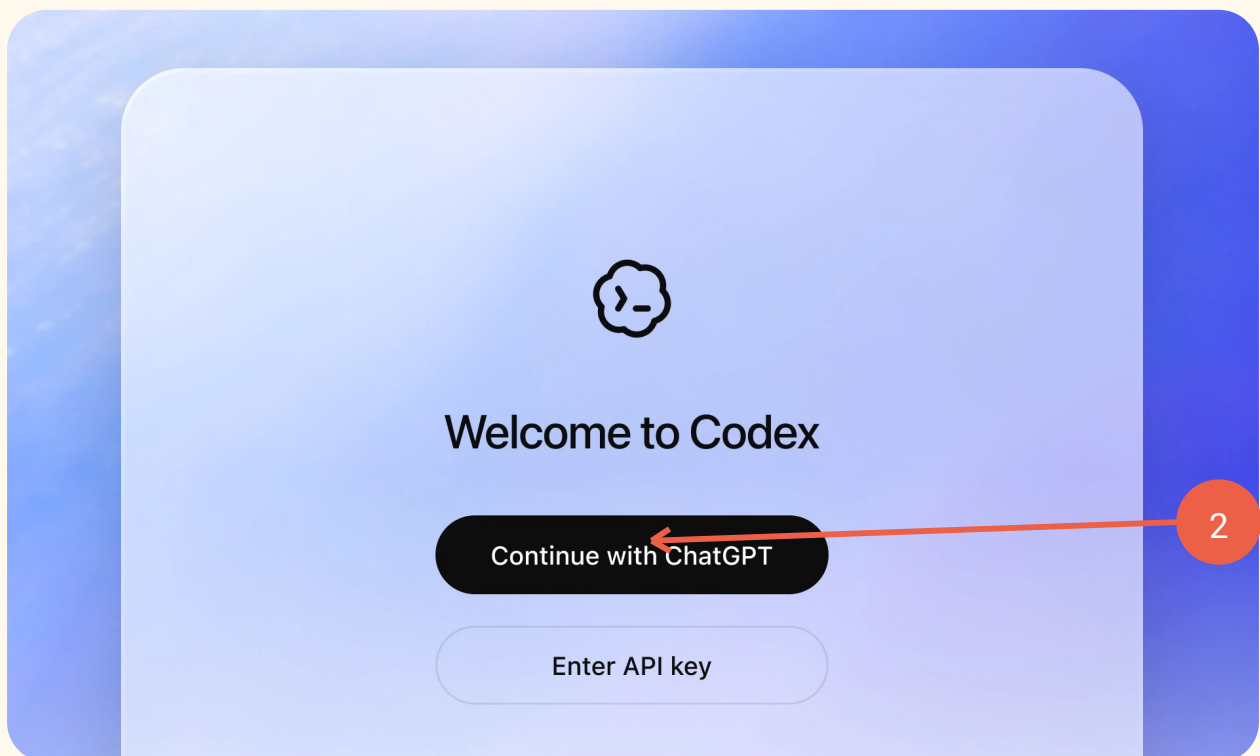

Install and sign in: where do I click?

Download from the official Codex page, open the app, and sign in with your free ChatGPT account.

Click the Download button

Official page: chatgpt.com/features/codex-get-started

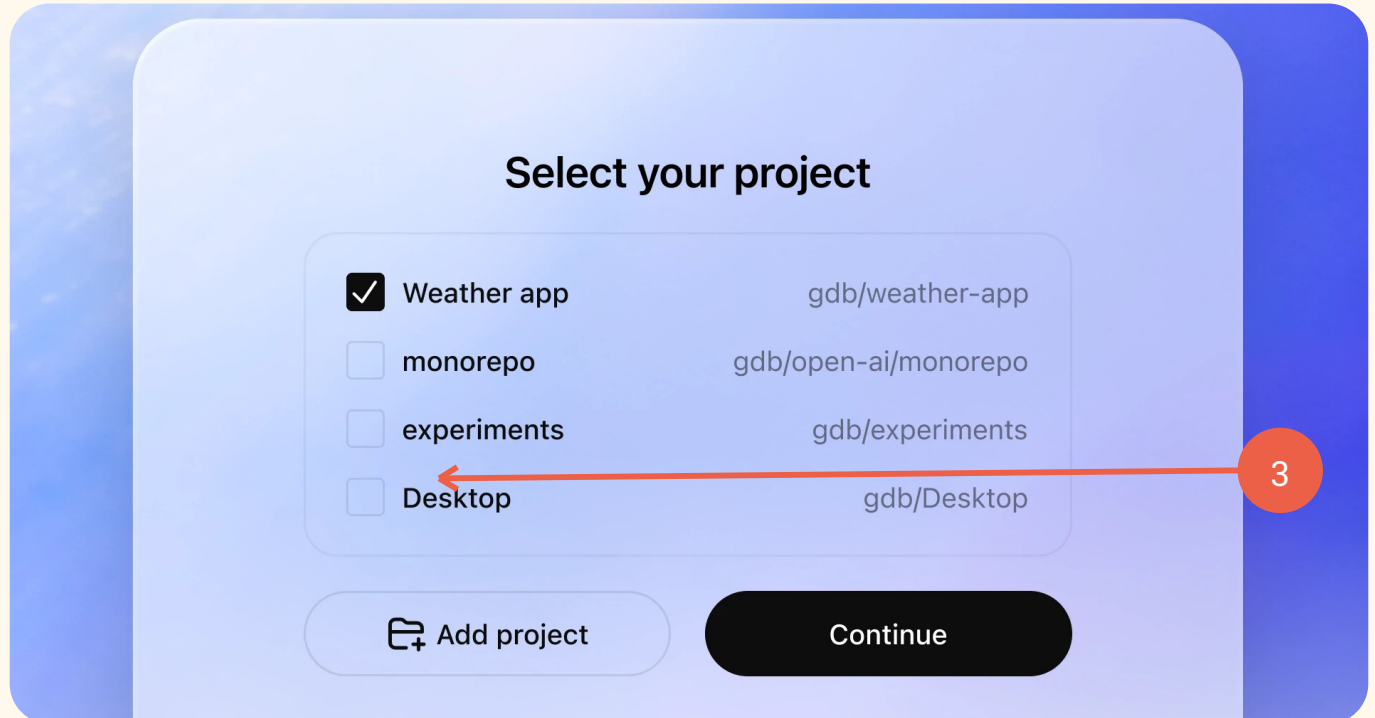

Click Continue with ChatGPT

You do not need an API key for this guide.

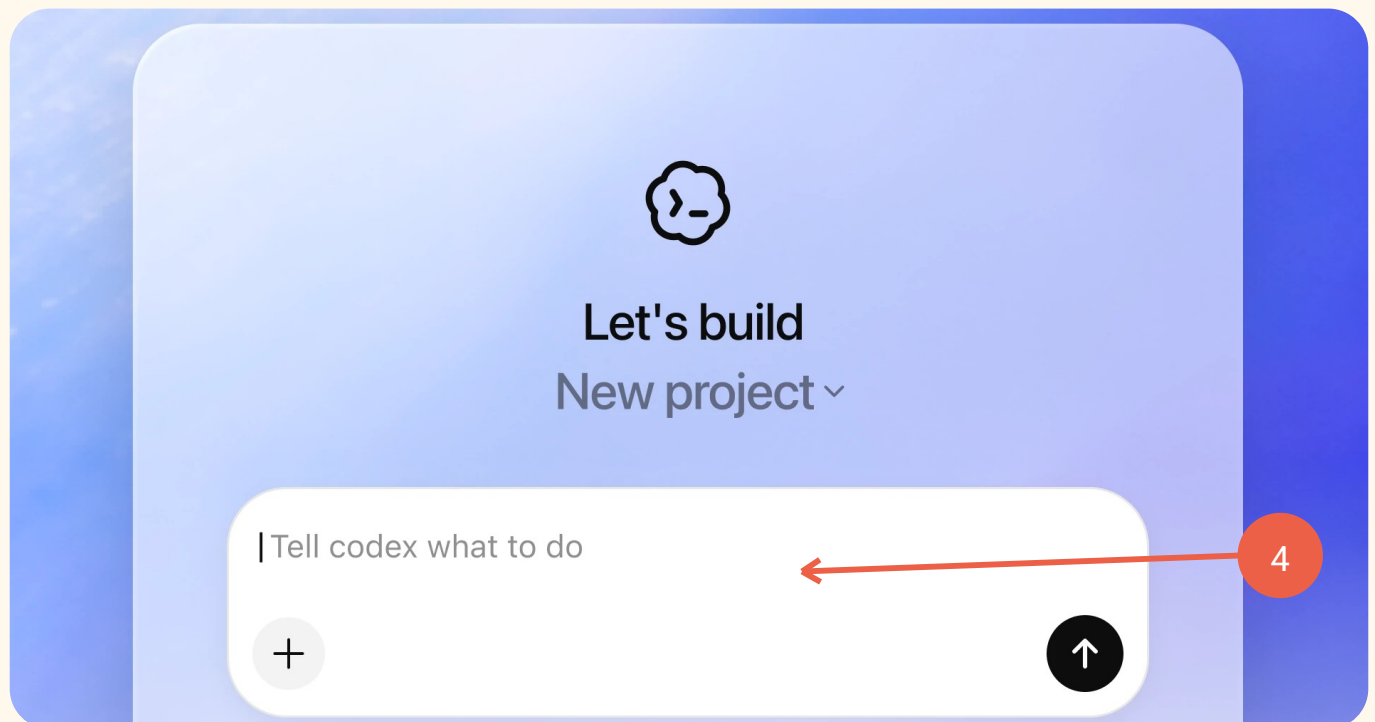

Select Desktop and send your instruction

These official screenshots show where to choose the folder and where to paste your prompt.

Check Desktop, then click Continue

Paste the prompt from the next page here, then click Send

Copy this prompt and send it to Codex

This prompt makes the agent show its plan first and wait for your approval before moving anything.

READY-TO-USE PROMPT

Review the files on my Desktop and suggest a simple, clear folder structure based on file type and purpose. First, show me only your proposed plan and folder names, then wait for my approval. Do not delete, rename, or overwrite any file. Put possible duplicates and anything you are unsure about in a folder named Review-Later. After I approve the plan, organize the files and give me a short summary of everything moved.

Read the proposed folders before you approve.

If something is unclear, ask: Why does this file go there?

Two replies you may need

IF THE PLAN LOOKS GOOD

I approve. Go ahead.

IF YOU ARE NOT SURE

Do not change anything yet.

A good agent works under your supervision

1

LIMIT THE SCOPE

Give the agent access only to your Desktop folder.

2

READ THE PLAN

The agent should explain what it will move and where.

3

NO DELETIONS

Uncertain files go to Review-Later, not the trash.

EMERGENCY STOP

If you see an unexpected action, deny permission and say: Stop. Do not make any more changes.

Nice work – your first agent did a real job

You did not write code, but you defined a goal, scope, rules, and approval point. That is the foundation of a trustworthy agent.

THE SIMPLE AGENT FORMULA

GOAL

Organize the Desktop

TOOL

Limited file access

RULE

No deleting or overwriting

HUMAN CONTROL

Approval before execution

IF THE RESULT IS NOT RIGHT

- Files did not move? Check access to the Desktop folder.
- Too many folders? Say: Create no more than five folders.
- Some files went to the wrong place? Ask for a report before approval.

NEXT CHALLENGE

Try the same method with your Downloads folder, using the same rules and approving the plan before files move.
